

Press release:

MONOSEM

Something new for Easy Adjust!

Monosem is proud to announce a significant update to its **EasyAdjust** application which will be unveiled at Agritechnica 2023. This update promises to provide users of Monosem planters with features to optimize the performance of their machines.

Some of the main improvements in this update include:

Video Tutorials: **EasyAdjust** now includes an extensive library of video tutorials providing clear, step-by-step instructions on machine maintenance, adjustments, and startup. These visual resources are designed to allow users to maximize the efficiency of their planters.

Integrated QR Code reader: The application is equipped with a QR Code reader which allows users to scan the QR Codes present on the different components of the machine. Once scanned, the application offers users specific videos providing detailed information on the settings associated with these components, thus guaranteeing optimal operation.

At Monosem, our priority commitment is to help our users maximize the performance of their planters using practical and intuitive tools. The video tutorials and QR Code reader provide farmers and operators with all the necessary resources for appropriate settings, ensuring optimal operation of their equipment. A poorly maintained or poorly adjusted planter can cause a considerable reduction in the quality of the seed, having a direct impact on yields. Therefore, our mission is to educate our users on these crucial issues, for the success of their sowing.

The **EasyAdjust** app is available for free now on the App Store and Google Play.
