

ValoTerra MultiSlide

Monosem, precision planter specialist, is proud to announce the launch of the ValoTerra metering unit on the new **MultiSlide** frame.

The **MultiSlide** frame stands out as a versatile and highly adaptable solution for farmers and contractors. Its main advantage lies in its sliding system, offering a multitude of configurations to adapt to different row spacings.

Here are some of its essential features:

- **Easy transport:** Thanks to its folding wings, the **MultiSlide** frame reduces to a transport width of 3 meters or 3.50 meters, thus facilitating movement between fields.
- **Hydraulic sliding:** The systems of claws fixed on the metering units and rails fixed on the frame allow the units to slide across the entire width of the frame, thus creating a multitude of configurations. In addition, this system minimizes the overhang, which, combined with the limited weight of the frame, makes it compatible with medium-power tractors.
- **Row spacing adjustment:** The row spacing is adjustable in 2.5 cm increments, offering a range from 45 cm to 80 cm, depending on configurations. Quick adjustment is possible thanks to an exclusive system of connecting rods equipped with pinless axle locking.
- **Fertilization:** The **MultiSlide** frame can be equipped with a system for working fertilizer products in the soil; to be used with a front hopper.

For the 2024 season, Monosem will offer the **MultiSlide** frame with the ValoTerra unit in limited quantities on the following versions:

- **MultiSlide 7 rows 300C 450:** 7 row configuration adjustable from 45 cm to 70 cm / 6 rows at 75 cm or 80 cm spacing, with a transport width of 3 meters.
- **MultiSlide 8 rows 300C 600:** 8 row configuration adjustable from 45 cm to 80 cm row spacing / 6 rows at 75 cm or 80 cm row spacing, with a transport width of 3 meters.
- **MultiSlide 9 rows 350C 600:** 9 row configuration from 45 cm to 70 cm row spacing / 8 rows at 75 cm or 80 cm row spacing, with a transport width of 3.50 meters.

The ValoTerra metering unit coupled with the **MultiSlide** frame helps meet the need for constant adaptability of farmers and contractors by providing a concrete response to the notions of productivity and cultural versatility.

To meet the growing demands of the agricultural world, Monosem will continue to expand its range of frames compatible with the ValoTerra metering unit.
